Professional Profile

Systems Engineer with over 4 years of experience in data scientist, automation, and data management within financial and commercial environments. Experience in web development and digital solutions. Proficient in SQL, Python, ETL processes, Power BI, and SQL Server for data integration, transformation, and visualization. Focused on building dashboards, strategic reports, and data analysis to support data-driven decision-making. Profile oriented toward Data Analyst and Data Scientist roles, with skills in Business Intelligence (BI) and technology solution development.

Work Experience

Undergraduate Intern – Banco AV Villas

Bogotá D.C | February 2025 – August 2025 (Ended)

- Automated internal processes by developing SQL queries to optimize the generation of SGI reports.
- Designed and implemented ETL processes to load and transform data into the department's database.
- Integrated results with Excel and Power BI for report consolidation and analysis.
- Achieved a significant reduction in time required to generate recurring reports.

Sales Consultant and Data Scientist – Tienda Gym

Bogotá D.C | January 2022 – August 2026

- Advised clients on purchasing gym equipment by identifying their needs and providing tailored solutions, contributing to increased sales.
- Designed and developed Power BI dashboards to monitor sales, inventory, and commercial performance, improving the visualization of key metrics.
- Implemented and managed a SQL Server database, structuring the company's operational and commercial data.
- Developed ETL processes using SQL queries, automating the monthly data loading and updating for Power BI analysis.
- Supported strategic decision-making through data analysis and the generation of actionable insights.
- Designed and developed the company's website, strengthening its digital presence and enhancing customer experience.
